This is the transcript of the Interview with the client done face to face.

Name: Mr. Sushil Rajpurohit

Date of the interview: 24 October, 2019

Me:- Good morning Sir, After testing out the product for about a week, how do you think it was?

The product was really amazing, it was actually better than what I had expected. I think I will be able to teach everything my students need with the help of the website. Only thing I saw different was the Image Generation part, I guess when we discussed earlier it was supposed to be Face Generation?

Me:- Yes Sir, But as per your requirements, you wanted all the techniques to run in the website and it was not able to generate faces properly, I mean it was not recognisable, so I changed it to Image Generation. According to me, as it was for teaching purposes that should not be an issue?

Yes, it is totally fine. Actually it is good that you changed it because now I can show them that it can generate anything, not only faces. Also it uses the same algorithm so there is no problem with that.

Me:- Sir, I would like to know more about how could I have improved the product.

I think that the product can have a loading screen to let user know about how much the model has been trained or if there is any process going on in the background. Also according to me, Animations can be added in the website to make it more interactive

and user friendly. Videos can be added in the website itself, so that user don't have to go to some other website to learn about AI.

Me:- I think you are right, I would make sure that I don't miss out these things next time. Thank you so much for letting me build your website.

No, Thank you for doing such a Wonderfull job.
